Blockchain Engineer - Remote - £ Open Budget + Equity Tired of being told what to do?

Ever wanted to establish the foundations and engineering best practices for a team you'll build around yourself, tailored to your vision? We've partnered with an early-stage start-up, constructing a decentralised options engine, fostering peer-to-peer transactions tailored for institutions and their clientele - a cutting-edge platform for OnChain Options Trading! Pioneering the exploration of on-chain derivatives, this company is seeking to transform the effectiveness of hedging and investment instruments, leaving conventional off-chain methods on the sidelines. Despite the \$500 billion market, only a mere 10% of options trading operates on-chain - a notable gap persists, a gap they're determined to bridge. Progress update? How far along are they? They're still in the early stages. They've initiated ideation and are laying the groundwork for implementation. Competitors? What sets them apart? While some projects within the Ethereum space are exploring similar directions, none are specifically targeting the products they aim to deliver. They prioritise complete innovations and extensive development on them. Also, they've partnered with a blockchain analytics company boasting 50+ high-profile clients, just two years after its inception. Looking for a Blockchain (Solidity) Engineer - automated Market Making protocol experience would be very nice, otherwise, experience with connecting to different blockchains and protocols. Familiarity with Bitcoin script would be ideal. As the founding engineer, you'll be the company's inaugural hire – unlimited potential. Fully Remote. Equity. Sizable budget. I encourage you to apply even if you think you may not currently fit all these requirements – so long as you have proven academics and are willing to work hard and learn, we want to hear from you. Note: if you haven't received a reply within 3

days, your application was unfortunately not accepted. Blockchain Engineer - Remote - £
