Company: Jenrick Commercial

Location: Halifax

Category: computer-and-mathematical

Cisco Network Engineer

Up to £52,600 per annum

Fully remote based role

Working for a global technology company we are looking for a Senior Network Engineer to look after the companies technical estate, ensuring that networks and firewalls are maintained and provisioned to support the business.

PLEASE NOTE

Due to the volume we will receive on this role please do not call to follow up on your application. You will receive confirmation your CV has been received and we will be in touch within 7 days if you are shortlisted.

Accountabilities within this role:

As the Senior Network Engineer, you will be responsible for all the networking infrastructure of both on prem and cloud network components

Your main day to day activities will be to assist the Network Team lead in day-to-day upkeep / project and cloud network migrations of the network services

You will also be working with a network engineer and helping to upskill them and to take

design lead / technical delivery according to the plans

A vital key to this role is the constant review of the firewall policy's and to review the overall infrastructure and to make sure there are no potential risks / vulnerabilities which are not fully documented / evidenced / recorded.

As the Senior Network Engineer you will be responsible for all internal networks and external networks so a good knowledge and understanding of MPLS / VPN's is key the same as HA firewall solutions and network segregation leveraging strict VLAN's and network zoning
From a monitoring perspective we use SolarWinds and PRTG but will be moving towards Zabbix as the overall solution going forward

Network monitoring services are in place on all devices

Regular backups of switches / routers and firewalls are in place

Regular patching of network equipment is maintained / in place and CAB process followed.

Multi datacentre networking and multi-site networking globally

Skills and experience required:

Good knowledge of PowerShell

Good general knowledge of network protocols such as TCP / UDP port mappings and vlan's

Good understanding of the following technologies but not limited to just them - Cisco switches / Cisco routers / Cisco firewalls / Radware load balancers / Fortinet firewalls / OSPF/ MPLS

Exposure to Citrix NetScaler an advantage

VPN setup on both Cisco ASA / Fortinet firewalls

Understanding of core IT Concepts

Problem resolution and root cause analysis

Have a good understanding of ITIL practices

Solarwinds exposure an advantage

AWS / Azure / VMWare certifications or extensive experience beneficial

Help desk ticket interaction

Change process experience required

Solid Cisco Router / switch and Firewall knowledge essential

Fortinet Firewall knowledge an advantage

Radware NLB knowledge an advantage

Good background in Citrix NetScaler technology would be ideal
