Company: RELX

Location: United Kingdom

Category: computer-and-mathematical

About the Business: LexisNexis Risk Solutions is the essential partner in the assessment of risk. Within our Business Services vertical, we offer a multitude of solutions focused on helping businesses of all sizes drive higher revenue growth, maximize operational efficiencies, and improve customer experience. Our solutions help our customers solve difficult problems in the areas of Anti-Money Laundering/Counter Terrorist Financing, Identity Authentication & Verification, Fraud and Credit Risk mitigation and Customer Data Management. You can learn more about LexisNexis Risk at the link below,

About our Team: You will part of a small team assisting the business with statistical analysis and building predictive models for credit, fraud, and identity risk.

About the Role: We are looking for a Data Scientist to conduct statistical analysis and build predictive models for credit, fraud, and risk. The ideal candidate will have experience in data mining, statistical methods, and modelling / scoring techniques. They will balance day-to-day analytics assignments, research experiments and will contribute to the advancement of the global data science group.

Responsibilities

Building and testing credit and fraud risk statistical models to be used by existing

and new customers

Providing complex analytical results in clear, simple messaging to evidence the value provided by our products

Following modelling best practices and provide feedback on ways to enhance current processes

Providing technical support and be a resource to internal partners in Product, Technology and Marketing teams

Researching new technologies and bring forward new ideas to the group

Supporting and help to shape our data science strategy

Requirements

Have degree in computer science, mathematics, statistics or quantitative methods (or equivalent experience). Master's Degree

Be able to demonstrable experience or knowledge of applied modelling and analytics experience in applicable industry

Have good understanding of statistical methods applied to data analysis

Have user experience of R, Python or equivalent analytic software.

Have understanding of various statistical methodologies including linear regression, logistic regression, and other advanced analytic techniques

Have good written communication skills, including the ability to describe statistical results to non-statistical audiences.

Experience processing large data sets and matching/merging multiple data sets.
