## GIS Consultant - UK (Locana)

[Apply Now](#)

Company: TRC Companies, Inc.

Location: United Kingdom

Category: computer-and-mathematical

### About Us

Groundbreaker. Game changer. Pioneer.

TRC has long set the bar for clients who require more than just engineering, combining science with the latest technology to devise innovative solutions that stand the test of time.

From pipelines to power plants, roadways to reservoirs, schoolyards to security solutions, clients look to TRC for breakthrough thinking backed by the innovative follow-through of an industry leader.

TRC's professionals work with a broad range of commercial, industrial and government clients and the communities they serve. We deliver breakthrough solutions that address local needs -- so our clients can better succeed in an ever-changing world.

Working at TRC means tackling interesting, meaningful projects. We pride ourselves on our collaborative spirit, entrepreneurial zeal and agile corporate structure. We recognize that the expertise of our staff is our strongest asset, so we generously reward employees for successful performance and invest in their careers through training and the development of new skills and certifications.

### Overview

The GIS Consultant will work independently or as a workstream or technical lead to provide GIS spatial solutions to our clients, based on industry standard software products, compliant with

international standards and industry and vendor best practices. This includes application build and management, integration with 3rd party and open source applications, process analysis, mapping, data management and spatial analysis. This role will also be expected to support the acquisition of new business, building professional networks and providing technical input to client meetings, demonstrations and proposals.

## Responsibilities

The GIS Consultant shall be responsible for:

Discovering, elaborating and documenting client business processes and requirements and identifying technical solutions and areas for improvement or innovation

Working independently, evaluating, selecting, and applying industry and/or product vendor best practices and techniques, procedures, and criteria to deliver quality solutions for clients

Performing complex spatial data analysis and reporting, editing, conversion, map production and geospatial database management tasks

Designing, editing, and maintaining spatial data and metadata for numerous projects

Creating and maintaining GIS data that follows client policies and standards

Working as an expert supporting design, development, implementation, and testing of complex GIS applications

Documenting functional and technical specifications that meet customer configuration, reporting, customisation and integration requirements

Contributing to the development of new methods, procedures, processes and/or system requirements

Supporting GIS projects in various geographic locations

Defining work scope for complex GIS tasks, breaking work down into manageable components, planning delivery and delivering to plan

Contributing to the adoption, implementation and development of GIS best practices

Working with the Project Manager / Customer Success Manager to provide suggestions for solutions and enhancements

Providing support to the business development team:

- Communicating spatial technology / business trends and how clients can benefit
- Technical input to proposals
- Developing technical prototypes

- Attending client meetings and demonstrating solutions Providing coaching and technical guidance to others

## Qualifications

In depth knowledge of GIS and complimentary subject matter areas and related regulatory and/or industry requirements

Demonstrates an understanding of spatial business trends and industry issues and challenges including BIM

Experience of implementing web GIS and mobile GIS solutions including Esri

Demonstrates a strong understanding of complex GIS concepts and spatial data as well as strong cartographic / data management and manipulation skills

Expertise in the design, deployment, integration and management of the full, current Esri ArcGIS Enterprise stack including Pro and Portal

Good understanding of network and data centre architecture, as well as application development methodologies

Experience in the deployment of FME Server and demonstrable experience in the design and publication of FME Workbenches

Demonstrates expertise in spatial database design and modelling, with proven experience of administering ArcGIS server database (SDE)

Proven Python scripting experience

Experience in compiling spatial information from a multitude of sources and data types

Good understanding of client business objectives, priorities and strategies for spatial solutions

Excellent QA/QC knowledge and implementation

Demonstrates a thorough understanding of company GIS objectives, priorities and strategies

Experience of:

- Working in an Agile delivery environment
- Working in a client facing role in a consultancy environment
- Working on client proposals
- Demonstrating solutions to clients

Excellent planning and organizational skills

Degree in engineering, geography or scientific discipline and/or professional certification in vendor products / technologies
