Principal Datacenter Commissioning Engineer

Company: Oracle

Location: United Kingdom

Category: other-general

Oracle OCI continues to grow aggressively increasing data center capacity Globally and at significant scale in key markets. We are seeking to recruit a design commissioning engineer with extensive experience in the data center space to join the formed and growing Data center Design team. The team is responsible for setting the design standards for OCI's partners be they colocation providers or developers. The team will be the center of excellence for all aspects of data center design supporting the compute, network and storage solutions deployed to deliver OCI's world class and highly secure cloud services to the world's largest and most successful businesses and the commissioning engineers will ensure our new facilities are fully tested and able to deliver reliable operation for Oracle Cloud Infrastructure. Come and join a growing and dynamic team of professionals delivering and growing the outstanding cloud services Oracle offers.Job description displayed in the job postingIn response to increased concurrent projects for the design and delivery of our data centers, Oracle is recruiting a Senior Commissioning Engineer. The role is a senior multi-disciplinary data center design commissioning lead with a focus all levels of commissioning activities up to IST, and responsible for the direct interface between Oracle and our data center partners in the completion and testing of building systems to bring a data center reliably to ready for service. With extensive experience designing and delivering mission critical facilities and professional qualifications in mechanical or electrical engineering with a commissioning focus the role is responsible for setting Oracles stance for commissioning activities and working with our design and collocation partners to ensure successful IST and move into operation. Responsibilities displayed in the job posting1. Oversight of the commissioning of multiple

projects and/or other design and engineering initiatives. Provides guidance and engineering leadership in ensuring project commissioning and/or other design and engineering initiatives are meeting or exceeding company expectations.2.Expert operating knowledge of engineering systems to include advanced diagnostics and repairs. Ability to apply knowledge of Oracle processes and procedures and industry standards to resolve non-routine issues. Utilizes safe working practices at an EXPERT level (e.g. can apply procedure for lockout/tag out, can explain MSDS, etc.). Evaluates and assures the safe working practices of others. Interacts with other engineering disciplines. Works with the colocation providers engineering teams to ensure mechanical systems are adequately designed, specified and installed to deliver robust operation for Oracle.3. Contributes to identifying and developing training programs for newer members of the team as it grows. Acquires knowledge by expanding experience with systems, vendor training, participation in industry groups or meetings and shadowing others. Is SME with many systems and trains others inside and outside of the group.4. Provides expert input for effective contract administration including generation and review of contracts, change orders, cost forecasts, and other pertinent documents and documentation.5. Contributes to mentoring junior team members. Directs all internal and external project team members delivering datacenters or part-datacenters for Oracle. Expert level communication to include cross functional SOP development and relevant technical writing. Interactions are primarily to exchange information between departments within the organization.6. Lead the interaction for Oracle with datacenter partners for successful commissioning of all electrical and mechanical critical systems, including but not limited to primary and back up electrical plant, mechanical plant, life safety and fire suppression systems, building monitoring and controls systems7. Responsibilities include the design, implementation and documentation of data center commissioning programs and procedures to verify data center facilities systems work as intended as per the basis of design.8. Work with the rest of the Design & Construction team to develop/organize O&M documentation to serve as a reference for Data Center Operations personnel9. Contribute to the design specifications of Oracle to ensure the contracting of reliable, resilient, and efficient data centers
