### Job Description

#### Process Engineer - Cork - Ireland

#### Permanent Full Time

Circa Euro 65000 (Negotiable) with exceptional flexible benefits package.

#### Must have right to work in Ireland

Penspen [www.penspen.com](http://www.penspen.com) have an exciting opportunity for an experienced Process Engineer based in Cork, Ireland.

You will have experience in the Oil & Gas industry, anything from Offshore to Onshore storage, Energy Transition, Gas Processing, Gas Compression & Pipelines, LNG.

The **Process Engineer** will have the following Qualifications:

An engineering degree (or equivalent) in Chemical and/or Process Engineering

Chartered Engineer (Member or Fellow of Professional Institute).

#### Main Purpose of Role:

To undertake the delivery of proposal and engineering activities from feasibility through to detailed design,

including the generation of process deliverables, as assigned by the lead engineer or project engineering

manager in accordance with Penspen's quality and engineering practice and procedures.

In addition to requirement to support all of Penspen's current process engineering activities, in both

facilities and pipelines, will be expected and encouraged to develop capability or expertise in specialist

process areas, such as HYSYS simulation or flow assurance.

**Responsibilities:**

Actively plans and manages own work load and the work load of individuals under their supervision to ensure all deliverables and associated work activities are issued in accordance with the project schedule and are compliant with Penspen QA procedures.

In addition to general process engineering deliverables is responsible for development of key basis of design and design philosophies.

Must ensure all project work is compliant with applicable client requirements and specifications, international codes and standards, and internal company standards.

Review and checking of process deliverables (with emphasis on checking). Approval of process engineering deliverables may be required in specific circumstances subject to granting of formal approvals authority by the CDE.

Supports the lead engineer in estimation, planning, management and delivery of process deliverables as per the process scope of work and assigned project role. May be required to lead all or part of project process scope of work.

Assumes responsibility for supervising and ensuring high quality work output from less experienced process engineers, including coordination of workload, and provides training of these individuals where required.

Takes initiative to identify, develop and follow-up recommendations to enhance own performance and wider process engineering practices, methods and tools.

Attends other Penspen office, client facilities or other locations as required to assist in proposal and project execution.

Participate in and take a lead role where required in key project safety and design reviews, including P&ID design reviews, HAZID, HAZOP and SIL studies, and model reviews.

Provide expertise as practitioner in application of specialist process software applications eg: HYSYS and flow assurance software.
