Senior Civil Engineer

Edinburgh

My client are an award winning, employee owned Design Consultancy with office across the UK. The business has grown from strength to strength over the last 60 years and due to another increase in workload, an opportunity has arisen in their vibrant Edinburgh office for a Principal or Senior Civil Engineer to lead their team.

They are well known locally for working on projects like Callander Primary School, Peterhead Community Campus, HMP Glasgow and the Nucleus Building at the University of Edinburgh and are looking for someone with project delivery experience, who is able to work somewhat independently while the team grows. They would also consider applicants who have experience managing people and projects and can help them become a more established team quickly so they can take on more work. The role will involve Project delivery while we continue to grow our team. This is a great opportunity to be a key part of building something that is destined for success

The role will involve Independently leading on the delivery of a wide variety of project types, including client liaison, financial management and quality management. You will also be supporting and mentoring other Engineers and Technicians in the development of their design and project information

You will have experience in the engineering design of both the public realm and new development infrastructure and will have technical design excellence and detailed understanding of relevant approvals processes for highways, earthworks and drainage design/adoption, including SuDS. As well as this you need to be experienced with roads and drainage design, working in accordance of section 38s, 104s & 278s, within development led projects. You will be required to take a leading role on projects and this will incorporate; client liaison, developing new & existing business relationships and mentoring of more junior / less skilful staff. It is preferable for the majority of your experience to have been gained using Civils3D, MicroDrainage and PDS software.

To get more information about this role, or other Civil Engineer / Infrastructure Design roles, please contact Sam Smith at Calibre Search or click apply

Calibre Search promote equality in the workplace and we welcome applications from all suitably skilled or qualified candidates regardless of their sex, race, disability, religion/beliefs, sexual orientation or age. We act as both an employment agency and employment business
