

Senior Linux Engineer

[Apply Now](#)

Company: CMC Markets

Location: London

Category: computer-and-mathematical

We are looking for a Senior Linux Engineer to work within our established team of London-based engineers responsible for both server and storage infrastructure. As the Senior Linux Engineer, you will be working in a team who are responsible for the provision, management and optimisation of many technologies that support CMC's trading platforms and business systems. Key technologies for this role include Red Hat Enterprise Linux running on VMWare/Nutanix virtual platforms and Dell blades and standalone servers. The team is also currently responsible for SAN, Block, File and Object Storage, Windows Servers, SCCM, Active Directory and Azure AD. The team works alongside network and data centre specialists, operations and application support engineers, performance engineers and developers.

Responsibilities:

Complete project-based work to enhance and improve IT in line with department and business goals

Increase process efficiency through automation and standardization

Perform in-depth investigation required to resolve technical issues, liaising with vendors where required

Produce and maintain repeatable secure configurations and monitor compliance against standards

Manage BAU workload of service requests, problems, incidents and changes

Provide regular communication to management regarding system availability, capacity, performance, operational issues and planned works

Produce and maintain appropriate documentation and conduct handovers for operational support

KEY SKILLS AND EXPERIENCE

Essential

Enterprise scale expertise of Red Hat Linux System Administration, including Satellite

Experience with automation technologies, particularly Ansible, PowerShell and Terraform

Experience of volume creation with underlying enterprise block storage technologies

Experience with virtual server platforms, ideally VMWare and Nutanix

Desirable

F5 load balancing, application delivery and security

Expertise with managing server hardware including DELL blades and rackmount servers via OpenManage

System-level performance tuning

Brocade SAN

Cloudian object storage

Weka distributed storage

File serving (NFS/CIFS/FTP)
