Company: DXC Technology

Location: United Kingdom

Category: other-general

At DXC Technology, delivering excellence for our customers and colleagues is more than just a motto, it's something we strive towards constantly through our work. Every day we deliver mission critical services in a secure environment whilst promoting our people first agenda, a real sense of community and a healthy work-life balance. Our consistently positive customer feedback and continuous growth helps us cement our place as one of the world's leading IT solutions enterprises, helping us deliver services and solutions in both challenging and exciting situations. We believe that hiring a diverse team is crucial to our success and our recruiting decisions are based on your skills and experience as an individual. We actively encourage consistent growth on our journey towards a culture of inclusion and recognise that the people we employ are vital to providing a great customer experience. As such, we have a variety of training, support, and tools available to aid in your continual personal and professional development. Our ongoing goal is to drive innovation and modernise operations across the board, which includes furthering the skills of our colleagues. At DXC, building a better you, builds a better us. Would you describe yourself as a creative and ambitious engineer who is always ready to take on the next cutting-edge technology? If your answer is yes, you are going to fit right in with our team. We are looking for a passionate, motivated, experienced, innovative individuals who would like to be part of our vision in helping clients transform their business. Our technical roles offer you the chance to grow your skills and experience whilst working alongside some of the most talented people in DXC. This role requires individual to be able to or already hold Security Clearance. Requirements include being a British Citizen who has lived in the UK for the last 5 years

continuously. Senior DevOps engineer A DevOps engineer delivers and integrates software to form a complete DevOps toolchain. They are responsible for planning and designing large groups of stories. Technical role: Skills needed for this role Availability and capacity management. You ensure the correct implementation of standards and procedures, identifying capacity issues, stipulating the required changes, and instigating these. You know how to initiate remedial action. Development process optimisation. You can identify process optimisation opportunities and drive implementation of proposed solutions. Information security. You know about information security and can design solutions and services with security controls embedded, specifically engineered as mitigation against security threats as a core part of the solutions and services. Modern standards approach. You can apply modern standards approach competently and can guide others in its use. Programming and build (software engineering). You collaborate with others when necessary to review specifications and use these agreed specifications to design, code, test and document programs or scripts of medium-to-high complexity, using the right standards and tools. Prototyping. You approach prototyping as a team activity, actively soliciting prototypes and testing with others. You can establish design patterns and iterate them. You can use a variety of methods of prototyping and choose the most appropriate ones. Service support. You will be able to demonstrate a breadth of understanding of service support. Systems design. You can design systems characterised by medium levels of risk, impact, and business or technical complexity. You know how to select appropriate design standards, methods and tools and ensure they are applied effectively. You can review the systems designs of others to ensure selection of appropriate technology, efficient use of resources and the integration of multiple systems and technology. Systems integration. You can define the integration build. You can coordinate build activities across systems and understand how to undertake and support integration testing activities. User focus. You know how to collaborate with user researchers and can represent users internally. You understand the difference between user needs and the desires of the user. You can champion user research to focus on all users. You can prioritise and define approaches to understand the user story, guiding others in doing so. You can offer recommendations on the best tools and methods to be used.
