

United Kingdom Jobs Expertini®

Software Engineer, Core Storage

[Apply Now](#)

Company: Redpanda Data

Location: United Kingdom

Category: computer-and-mathematical

We are a team of doers, seasoned engineers, hackers and builders, working on the future of streaming data.

Funded by premier investors including GV and Lightspeed, Redpanda is building the streaming data platform for developers. We're evolving streaming beyond the Apache Kafka® protocol into a unified "engine of record" that delivers a categorical reduction in complexity, wicked-fast performance, onboard Wasm transforms, and transparent tiered storage that gives consumers access to both real-time and historical data from a single API.

The Core team's mission is to create the best data streaming platform. The team consists of known experts in foundational technologies such as Raft/consensus, transactions and distributed storage, who have come together to build a differentiated highly performant product with compelling traction in the market. We work closely across multiple functions at Redpanda and our work directly drives key business metrics through various SaaS and self-managed offerings. Redpanda is growing and so are we.

You are:

Passionate about world-class systems software development and the value it provides

Excited to roll up your sleeves and do what it takes to deliver objective results

Eager to thrive with the thrill and ethos of a fast growing startup

Accountable, bring a sense of ownership and are self-driven

You have:

Strong understanding and experience in C++

Substantial relevant experience of at least 10 years in a professional role

Passion for working on deeply technical projects in the realm of distributed persistent systems (e.g. scalable filesystems, databases), concurrency and parallelism, replication protocols, and correctness.

Experience working on the internals of such systems, whether open source (e.g. Ceph, Kudu, Cassandra) or proprietary (e.g. high-scale cloud backend systems)

Desire to further develop your skills in building scalable and performant systems

Pride in writing robust, well-abstracted code and care as much about deleting dead code as writing new code

Experience or desire to work with a 100% distributed engineering team, collaborating on GitHub, in the open

Excellent written communication skills

You will:

Excel in hands-on contributing across multiple complex projects in the capacity of a lead

Lead laying down the technical vision owning delivery of technical milestones in service of business goals

Contribute equally effectively whether coding or with ensuring multiple large projects are coherent in their design

Articulate, influence and effectively collaborate with cross-functional company-wide leadership, including our CEO

Guide and influence tactical and strategic investments

Play a major role in hiring, mentoring and growing technical teams through your exemplary leadership

U.S. base salary range for this role is \$214,000 - \$283,000 (CA, NY, WA). and \$210,000 - \$246,000 (other US locations). Our salary ranges are determined by role, level, and location. As a remote-first company, we strive to consider each candidate's job-related skills, location, experience, relevant education or training to determine individual base salary. Your talent partner will share more about the specific salary range for your preferred location during the hiring process.
